PCT

NOTIFICATION OF ELECTION

(PCT Rule 61.2)

To:

Commissioner
US Department of Commerce
United States Patent and Trademark
Office, PCT
2011 South Clark Place Room

CP2/5C24 Arlington, VA 22202

Arlington, VA 22202 ETATS-UNIS D'AMERIQUE

Date of mailing (day/month/year)
06 November 2000 (06.11.00)

International application No.
PCT/EP00/02473

International filing date (day/month/year)
17 March 2000 (17.03.00)

Applicant

DAVIES, Gerald, Howard et al

1	The designated Office is hereby notified of its election made:
1.	The designated Office is neverly notified of its election made.
	X in the demand filed with the International Preliminary Examining Authority on:
	04 October 2000 (04.10.00)
	in a notice effecting later election filed with the International Bureau on:
2.	The election X was
	was not
	made before the expiration of 19 months from the priority date or, where Rule 32 applies, within the time limit under Rule 32.2(b).
	·

The International Bureau of WIPO 34, chemin des Colombettes 1211 Geneva 20, Switzerland Authorized officer

Industrial applicability (IA) Yes: Claims 1-9
No: Claims

2. Citations and explanations see separate sheet

VII. Certain defects in the international application

The following defects in the form or contents of the international application have been noted: see separate sheet

VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made: see separate sheet

Item V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents: 1.

D1: US-A-3 977 888

D2: US-A-4 277 284

D3: WO 98 58028 A

D4: WO 88 06177 A

D5: GB 1485169 A

D6: EP 0638379 A

D7: EP 0663620 A

Novelty and inventive step (Art. 33(2) and (3) PCT). 2.

D3 and D5 disclose coating compositions comprising silica, a silicate and zinc. These two documents do not disclose the use of a SiO₂/M₂O mole ratio of the binder of at least 6:1, and do not disclose the use of silica or silicate particles with an average size smaller than 10 nm either.

The silica sol particle size has an effect on the build up of mechanical properties in particular on the double rub resistance. (see example 8, p 4, I 17-20)

A SiO₂/M₂O mole ratio of at least 6:1 is important for the resistance to osmotic blistering of the coating (see p 4, I 22-23).

This was not suggested in any of the available prior art documents.

The compositions claimed can be used for coating a metal substrate. 3.

Item VII

Certain defects in the international application

D5 is not acknowledged in the description as required by Rule 5.1.a)ii) PCT. 1.

EXAMINATION REPORT - SEPARATE SHEET

Item VIII

Certain observations on the international application

- Art 6 PCT: Clarity 1.
 - a) It is clear from the description (p 5, I 10) that the SiO₂/M₂O ratio relates to the binder as a whole. In claim 1 however, the wording is such that the ratio relates to the silicate or silica only.
 - b) The compositions of example 7 do not contain any zinc so that they do not fall under the scope of the present claims. Example 7 is therefore a comparative example.

28

22 02 2001

<u>Claims</u>

5

15

- 1. A composition for coating a metal substrate which is intended to be fabricated and overcoated, said composition comprising a silica or silicate binder and zinc powder and/or a zinc alloy, characterized in that the binder comprises an aqueous silica sol or alkali metal silicate having a SiO₂/M₂O mole ratio of at least 6:1, where M represents total alkali metal and ammonium ions, and wherein the silica or silicate particles have an average size equal to or smaller than 10 nm.
- 10 2. A coating composition according to claim 1, characterized in that the binder is a silica sol of SiO₂/M₂O mole ratio at least 25:1.
 - 3. A coating composition according to claim 1 or claim 2, characterized in that the binder comprises an aqueous solution of an alkali metal or ammonium silicate stabilized by a siliconate substituted by at least one anionic group of lower pKa than silicic acid, having a pH of 7 to 10.5 prepared by lowering the pH of a solution of silicate and siliconate by ion exchange.
- 4. A coating composition according to any of claims 1 to 3, characterized in that the silica particles have an average size in the range 3 nm to 10 nm.
 - 5. A coating composition according to any of claims 1 to 4, characterized in that the binder further comprises a silane coupling agent.
- 25 6. A coating composition according to any of claims 1 to 5, characterized in that the binder further comprises an organic resin.
 - 7. A coating composition according to any of claims 1 to 6, characterized in that it is a water-based shop primer.
 - 8. Water-based shop primer for the coating of steel substrates which are intended to be fabricated and overcoated, said composition having a solid content of 20 40 % by volume, comprising:
 - an aqueous silica sol or alkali metal silicate binder having a SiO₂/M₂O mole ratio of at least 6:1, where M represents total alkali metal and ammonium

30

29

ions, and wherein the silica or silicate particles have an average size equal to or smaller than 10 nm,

- 10 90 % by volume of the coating on a dry film basis of zinc powder and/or a zinc alloy having a mean particle size in the range 2 to 12 μm,
- 0 35 % by weight, based on silica or silicate, of an organic resin,
 - 0 30 % by weight, based on silica or silicate, of a silane coupling agent,
 - optionally non-zinc pigment(s) having a mean particle size below 3 μm, and
 - optionally a pot-life extender.

(54) Title: COATING COMPOSITION FOR METAL SUBSTRATES

(57) Abstract

The present invention relates to a composition for coating a metal substrate which is intended to be fabricated and overcoated, and wherein the binder comprises an aqueous silica sol or alkali metal silicate having a SiO₂/M₂O mole ratio of at least 6:1, where M represents total alkali metal and ammonium ions, and wherein the silica particles have an average size equal to or smaller than 10 nm. Very good results are obtained if the dried coating is post-treated with a film-strengthening solution.

A. CLASSIFICATION OF SUBJECT MATTER IPC 7 C09D1/02

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols) IPC 7 C09D

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

C. DOCUM	ENTS CONSIDERED TO BE RELEVANT	•
Category °	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to daim No.
